

EMA

Utility intelligence for physical assets.

Visibility and control over consumption, billing and performance, across every site, on one platform.

What EMA is

EMA is a trusted digital operator that gives organizations **visibility and control over utility consumption, billing and performance across electricity and water**, on a single platform. From metering and recharge to revenue and reporting, EMA turns physical assets into a managed, measurable utility, run end to end from one place.

What it does

Prepaid and postpaid metering

Meter electricity and water across the estate, prepaid or postpaid, with accurate per-unit reads.

Tokenless recharge

Top up straight to the meter with no tokens to type. Mobile money and card: Visa, Mastercard and Amex.

Offline resilient

Billing and recharges keep working through power and network outages, so revenue never stops.

One portfolio dashboard

Revenue and energy across every site in one view, with reporting your finance and operations teams can trust.

Estate-wide coverage

Cover a whole development with no per-meter hardware to buy, install and maintain site by site.

Built to scale

Add sites, meters and tenants as you grow, with the same controls and the same single platform.

Live today

Live at Fumba Town, Zanzibar. EMA is running today across the development, in partnership with the Town Operations Company and CPS Africa, metering, billing and recharging real assets end to end.
